

We have put together this list from widely available information on the internet. Please look over the list if you have never played a DVD-R to see if your player is compatible. Our DVD-R's are region free and we use the highest quality DVD-R media to maximize compatibility with DVD players. The vast majority of DVD players work fine with DVD-R discs, but certain older models may not work well.

We have compiled a list of DVD players and their compatibility rating with DVD-R discs. You should check this list for your brand and model of DVD player if you haven't played a DVD-R disc in your player before. The list is organized by manufacturer and model number. Use your browser's Find feature to search the page for your model.

---

Please scroll to the bottom of the page for TIPS on what to try if your disk does not work.

\* when configured with standard DVD or DVD-R drive

---

This list is BY NO MEANS 100% but rather just a guide listing some known players and their ability to play a DVD-R. If you player was purchased after 2000 or so, you should have no problems with these disks.

For a complete and more up to date list of players and their Compatibility with different types of media you should goto:

<http://www.videohelp.com/dvdplayers.php>

---

### TIPS

Try the disk again: Make sure there are no fingerprints, scratches, dirt etc on the bottom of the disk. If there is anything on the surface of the playing area, GENTLY wipe it off.

Do not rub hard as you can scratch the surface and cause additional problems.

### OR

Try the disk in another player. If it works fine there, then you may have a Compatibility issue as noted above.
